

Successful Strategies

1. Take notes from text,
(hardcopy + online) BEFORE
we cover material.

2. Take notes when you do the
webassign + other problems.
When you get it wrong the
first time, write down why
you chose that answer +
what was wrong. Repeat
until you get it right.
If you get it right 1st
time, still write why!

3. Hold study groups +
discussions. Face to
Face is best, but if
not, use facebook, im,
whatever, just talk
about physics.

4. ASK QUESTIONS.

5. Before tests + quizzes
Create your own study
guide of key concepts,
equations, problems,
types of problems,
traps to avoid + some
examples

6. STAY ORGANIZED!
w/notes, equations, corrections
etc.

7. START PROJECT NOW!
